Double Patenting

The USPTO rejected a number of the claims of the application asserting obviousness-type double patenting based on copending application serial nos. 10/290,780 and 10/047,598. In making these double patenting rejections, the USPTO asserted that it would have been *prima facie obvious* to one of ordinary skill in the art to have not added a magnesium promoter into the instantly claimed catalyst to produce a less promoted catalyst. While the applicants disagree with this assertion of obviousness and specifically reserve the right to contest this position, to put the claims in condition for allowance, they are filing a new Terminal Disclaimer to overcome these two rejections. This new Terminal Disclaimer is also being filed in response to the objections to the previously filed Terminal Disclaimer. Accordingly, a properly executed Terminal Disclaimer is attached as Exhibit A.
